

Infectious diseases - Exam questions - Faculty of Stomatology

1. Characteristics of causative agents of viral hepatitis and their epidemiological features.
2. Hepatitis A - epidemiology, clinic, diagnostic methods, prevention.
3. Hepatitis B - epidemiology, clinic, diagnostic methods, prevention.
4. Hepatitis C - epidemiology, clinic, diagnostic methods, prevention.
5. Hepatitis D - epidemiology, clinic, diagnostic methods, prevention.
6. Hepatitis E - epidemiology, clinic, diagnostic methods, prevention.
7. HIV infection / AIDS - pathogen, epidemiological features, prevention.
8. Changes in the oral mucosa with HIV infection / AIDS.
9. Acute respiratory viral diseases, pathogens, epidemiology.
10. Influenza - epidemiology, course of the disease, changes in the oral cavity.
11. Parainfluenza - epidemiology, course of the disease, changes in the oral cavity.
12. Adenovirus infection - epidemiology, course of the disease, changes in the oral cavity.
13. Diphtheria - a characteristic of the pathogen, epidemiology, course of the disease, changes in the oral cavity.
14. HSV infection (types I and II) - epidemiology, course of the disease, changes in the oral cavity.
15. Meningococcal infection - a characteristic of the pathogen, epidemiology.
16. Botulism - epidemiology, course of the disease, diagnostic methods, prevention.
17. Measles - epidemiology, course of the disease, changes in the oral cavity.
18. Rubella - epidemiology, course of the disease, changes in the oral cavity.
19. Chickenpox - epidemiology, course of the disease, changes in the oral cavity.
20. Scarlet fever - epidemiology, course of the disease, changes in the oral cavity.
